IN THE ABSTRACT:

Page 46, delete lines 8-13, and insert --The system includes an interactive multimedia mastering (IMM) system for receiving multimedia program materials from a program source, a multimedia call processing system (MCPS) coupled to the IMM, and a plurality of interactive multimedia devices (IMDs) for distributing multimedia information to users. The IMM optimizes the program materials by separating the information into primary and secondary layers using psychographic parameters to differentiate between important and less important multimedia information, and then compresses at least a portion of the layers for transmission to the MCPS. The IMDs accept user commands for multimedia information from a telephone, which cause the IMD to transmit a control signal to the MCPS. The MCPS receives the control signal while in a voice mode, and in response, branches to a program
